

SECURUS

Risk Management At Work

“Implementing SECURUS brings absolute controls over PC and Internet Misuse”

- INCREASES STAFF PRODUCTIVITY BY UP TO 32%
- PROTECT COMPANY CONFIDENTIAL INFORMATION
- REDUCE EXPOSURE TO LEGAL ACTION
- INCREASE MANAGEMENT EFFECTIVENESS
- REDUCE NETWORK OVERHEAD COSTS

Only by knowing what breaches of your AUP are taking place can your organisation properly manage and maintain the integrity of its network. At the same time the freedom element of the Internet is maintained, and the productivity advantages to be gained

from the proper use of the Internet remain unimpaired.

Securus Software Ltd's **SECURUS** software is the most advanced and unique filtering, monitoring and reporting software available today. **SECURUS** provides monitoring and detection, recording and reporting of any data activities in violation of a company's Acceptable Use Policy, whether generated internally or externally, on-line or off-line. Captures of all AUP violations are recorded as screen captures, along with the time, workstation name, user identity, application and violating word or phrase. The software

provides complete Risk Management capabilities of all electronic communications and transactions on networked PC's running under the Windows™ Operating systems.

FULLY EFFECTIVE IN ALL APPLICATIONS

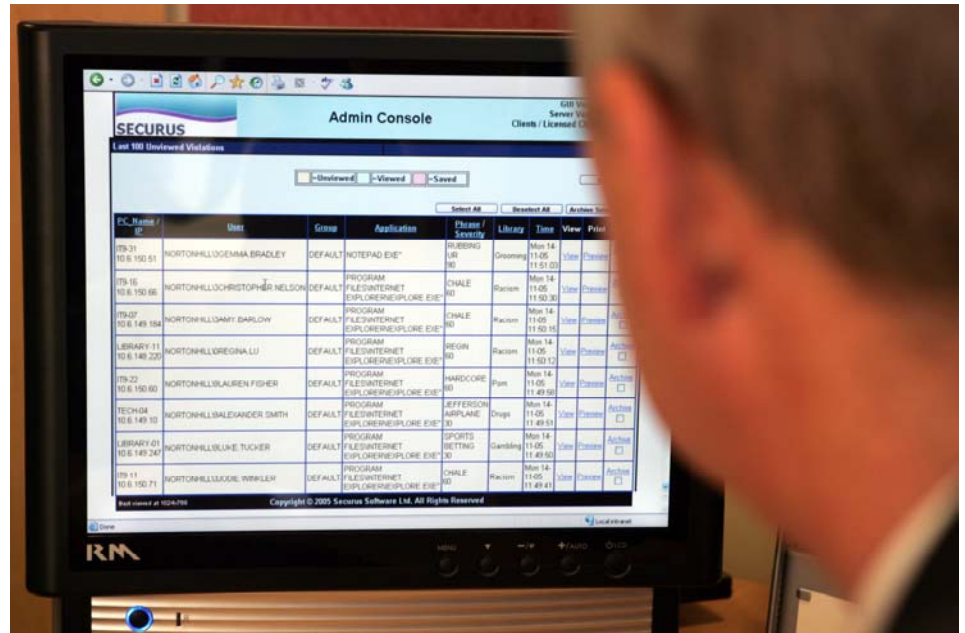

Securus Software Limited was established in July 2000 specifically to offer a suite of advanced Risk Management Software solutions throughout the United Kingdom and Continental Europe. The services provided include consultancy, software implementation, support services, and training.

SECURUS

FEATURES/BENEFITS

- ✓ Displays the Organisations Acceptable Use Policy (multiple AUP's are selectable)
- ✓ Monitors all PC activity that contravenes the AUP:
 - Internet Access
 - E-mail
 - File Transfers
 - Instant Messaging
 - File attachments even when encrypted
 - Chat Rooms
 - Off-line Activities
 - Peer to Peer (P2P)
- ✓ Runs in Active (visible) mode or Stealth (hidden) mode
- ✓ Monitors internal PC traffic not just at network perimeter
- ✓ Monitors/Captures whilst PC is removed from the Network
- ✓ Browser based for ease of installation and management
- ✓ AUP violations are viewable and printable as multiple choice reports
- ✓ Improves productivity by highlighting off-task activity including web access and unauthorised applications

"By installing SECURUS you will be able to implement a fast, simple and cost effective approach to ensuring acceptable use of Internet and Email".
