

At Work in the NHS

Who's Breaching Your Code of Connection and AUP? "It Could Be Anyone"!

- Detects and reports Policy violations (even encrypted files) in:
 - ✓ Internet Access
 - ✓ Email
 - ✓ All Applications
 - ✓ File Transfers
 - ✓ Downloadable Executions
 - ✓ All Off-line Activities
- Protects the confidentiality of stored data
- Protects against rogue network access and transitory users
- Provides proof in corporate or criminal investigations
- Includes Asset Management & License Auditing
- Incorporates secure hardware platform

SECURUS is UNIQUE. It is the only product "worldwide" that provides a complete and totally secure solution to Policy, Code of Connection, AUP and Client Security concerns. It cannot be circumvented or bypassed; it monitors, captures and reports ANY unauthorised, criminal, inappropriate or insecure activity on a network, PC or laptop, and provides assistance and proof in criminal investigations, thereby enabling Policy Enforcement and Compliance.

At the same time, the freedom element of the Internet is maintained, and the productivity advantages to be gained from the proper use of PCs remains unimpaired.

All policy violations are recorded as screen captures, with time; date; user identity; violating word or phrase, and the application involved. This evidence can be used for disciplinary purposes, in court or at tribunals.

Only by knowing what breaches are taking place can your organisation properly manage and maintain the integrity of its network and client attachments. SECURUS empowers the network administrator.

"By installing SECURUS you will be able to implement a fast, simple and cost effective approach to ensuring acceptable use of Internet and Email".
