

Providing Complete Protection At Home

SECURUS is the most advanced and unique filtering, monitoring and reporting software available today. It provides monitoring and detection, recording and reporting of any data activity, whether generated internally or externally, on-line or off-line. Captures of all violations are recorded as screen captures, along with the date & time, user identity, application and violating word or phrase. A simple click shows the offending screen.

Busy lives mean that concerned mums and dads cannot continuously monitor each child's computer activity at all times. With this in mind, SECURUS provides a unique tool for analysing, monitoring and blocking undesirable, predatory, and sexually explicit computer traffic providing automated supervision when you can't

SECURUS provides complete Risk Management capabilities of all electronic communications and transactions on PC's running under the Windows Operating systems.

SECURUS brings complete peace of mind to concerned Parents.
